

Kodak Info Input Express

Web-based capture is evolving.

Simple, smarter, more productive, more secure web-based capture.

Info Input Express is an easy, intuitive web-based capture solution designed to allow users to simply scan, capture via mobile, index, convert and submit documents to their desktop or business systems.

Info Input Express helps employees in individual departments, and small to medium businesses to simplify document capture so information can be quickly and easily used in business processes. This web-based application is simple to understand and use. Basic indexing steps ensure documents and data are consistently captured and delivered to the right place with less human error. Businesses can centrally deploy updates and policies to all users, which saves on maintenance and training costs.

Improve your existing Enterprise Content Management (ECM) infrastructure with a capture solution ideal for mission and time-critical transactional applications.

Simplicity

- Businesses need simplicity but don't want to compromise on functionality.
- Set up user groups and defined workflows easily (based upon different fields, document types and scan job) from a central administrator and share to different departments or remote sites.
- Works with all scanners, however, teaming up with Kodak Alaris scanners brings another benefit. Scan direct into predefined workflows using **One Touch/Smart Touch** capability.
- With simplicity comes compliance. Manage the capture workflow and enforce policies and upgrades across your capture solution while reducing costs.

Deliver to the application of your choice

Info Input Express can connect to various lines of business and output applications such as **Box, Dropbox, Salesforce, OneDrive, Google Drive, SharePoint, SharePoint Online**, and more.

Easy to deploy

- Reduce maintenance costs by using existing infrastructure.
- Provides centralised, consistent job set up, configuration and control workflow/output regardless of what platform/device is used.

Intuitive user interface

- The user interface is designed to be simple and easy to use.
- Easily initiate key tasks such as scan to a specific folder with one click.
- Configurable to only show tasks that the user has access to.

Extend the capability of your capture solution

- Info Input Express extends the functionality of your thick client capture solution, e.g. Capture Pro, with an ability to simplify the user interface.
- This enables you to utilise a simple standard interface to allow indexing to occur remotely. For example, you may have centralised capture but wish to have a separate audit department perform indexing.

On the go capture – through mobile

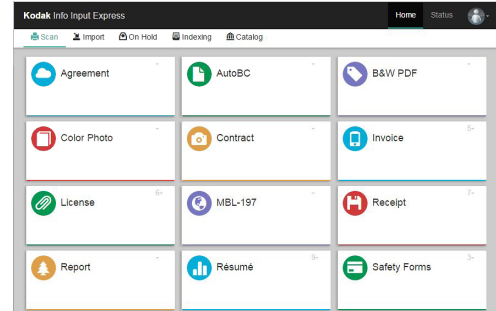

Maintain security and capture business critical information via an app on your mobile or smart device and ensure documents are quickly sent to your predefined workflow.

Easy data extraction

- Info Input Express uses OCR (Optical Character Recognition) to enable easy and automatic data extraction.
- Automatic data field population ensures an increase in productivity and a reduction in manual errors.
- Complete simple indexing steps at different remote locations or at a single site.
- Utilize historical assisted indexing where previously used items are offered as suggested indexing terms.

Easy to retrieve information

- No more time lost searching for your document. Easy retrieval makes your business more productive.
- The catalog function enables you to record the document location and the associated indexed data, ensuring you have a clear chain of custody.

Simple, intuitive interface for ease of use

Specifications

Express Server	
Minimum system requirements	Server hardware: CPU: 4-core, x64, 8GB RAM Operating System WINDOWS Server 2012 R2 (64 bit) Database: SQL Server 2012 or greater, SQL Server 2014 Express Advanced or greater
Browser	Google CHROME Microsoft INTERNET EXPLORER 11 Microsoft EDGE Mozilla FIREFOX
Express Software	
Minimum system requirements	2.8 GHz CPU 2 GB system memory (4 GB is recommended) 2 GB of free disk space Microsoft .NET Framework 4.5.2
